Hiring Manager

Emerson

Mandaluyong City, Philippines

Re: Application — Senior Analyst, Supply Chain

Dear Hiring Manager,

Before submitting this application, I built a Supply Chain S&OP Performance Dashboard from scratch — dither-reyes.vercel.app — tracking five KPIs across 4 product families and 30 SKUs over 12 months, with a Top 30 SKU inventory report with DOS flags, forecast miss root cause analysis, and a full-year S&OP scorecard heatmap. I built it because I wanted to understand the analytical structures and reporting formats behind S&OP before walking into a conversation with a supply chain team at a company like Emerson — not just describe that I could do the work, but demonstrate it.

As a Reports Analyst at Alliance Global Solutions, I do the core loop this role describes every day: collect, validate, and organize operational data from multiple systems; maintain recurring KPI dashboards and exception reports; and build monitoring views that give operations leadership visibility into performance and action items. I have designed normalized PostgreSQL databases with full audit trails, built automated reporting pipelines that refresh on a fixed cadence, and collaborated with stakeholders to define reporting requirements and resolve data-source limitations.

What draws me to Emerson specifically is the emphasis on operational excellence and structured process improvement. The Waste Walk initiative in this role resonates with how I approach reporting work: find the manual step, build the automation, measure the result. I eliminated a daily 15–30 minute cross-system data transfer by building a headless automation pipeline that now runs in under 3 minutes unattended — and earlier, as a Shift Supervisor at Starbucks, I calculated supply order quantities from historical sales, usage, and waste data, which gave me a practical grounding in the inventory decisions that supply chain reporting is meant to support.

The dashboard is live — I would be glad to walk you through it in an interview. Thank you for your time and consideration, and I look forward to the opportunity to contribute to Emerson's supply chain team.

Sincerely,

Dither Reyes
